House Martin Mapper is a free tool hosted by Coreo, the same host site used for SwiftMapper

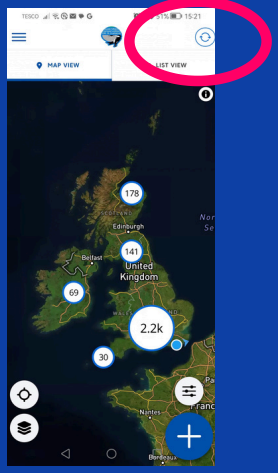
Mapper Syncing Instructions

There are two different reasons when you may need to sync the mapper:

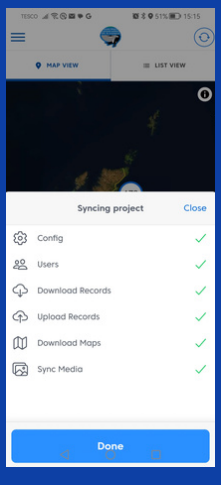
- **When new options have been added to the mapper to access the new changes - follow the instructions in the blue box**
- **If you get an error message when adding or editing a record (usually when mapper has not be used in a while) - follow the instructions in the green box**

Syncing mapper for new updates

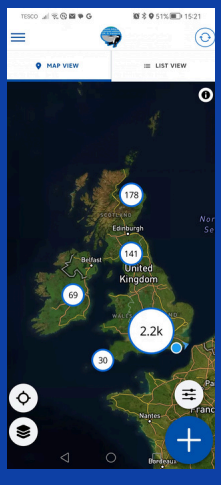
1: Click on the arrow circles, top right



2: Syncing will start and show progress

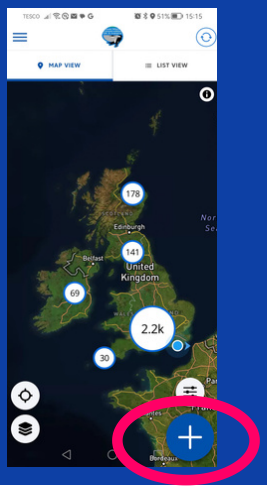


3: When syncing is finished, the map will appear

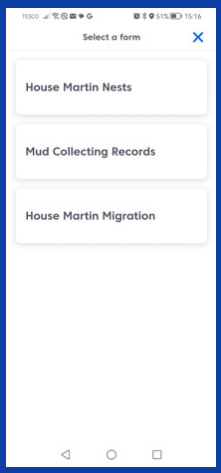


To access the changes

1. Click the blue and white plus (+) button for the mapper options



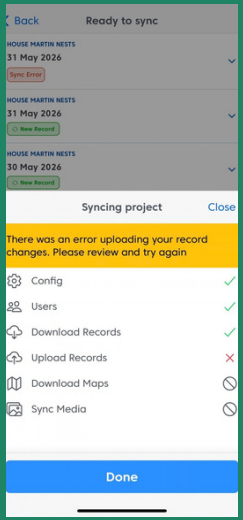
2. Select the record type you would like to add



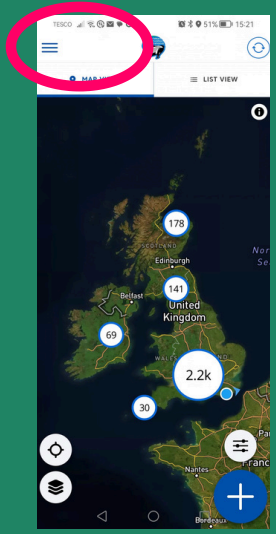
Error message adding/editing a record

Complete or write down any unsaved records before following these syncing instructions or they will be lost

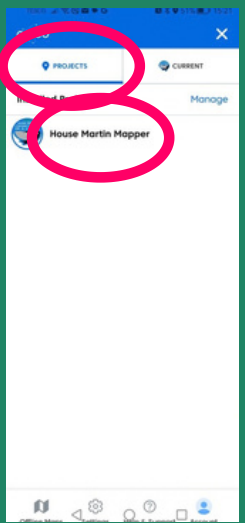
Error message received



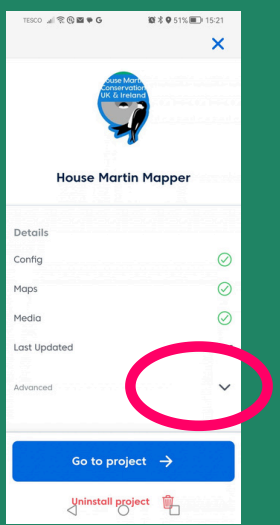
1: Click on the menu

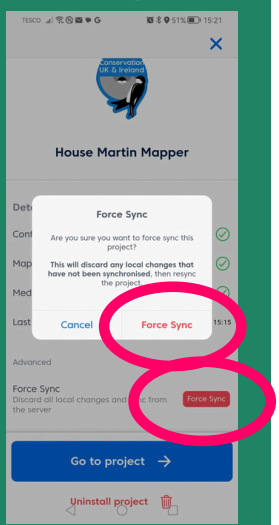


2: Select the projects tab, then select House Martin Mapper



3. Click on the advanced option down arrow





4. Select Force Sync, then confirm action to force sync
